

Mepiquat Chloride 25% SL

PGR

Nutrition & Protection

Plant Growth Regulator

It is a plant growth regulator that regulates growth for cotton, onion and garlic. It has a systemic action. It is absorbed by the leaves and carried to all parts of the plant. Shortly after it is applied, the leaves turn dark green and the plants gain a more lively appearance.

Active ingredient:
Mepiquat Chloride
25%
Formulation:
Soluble Concentrate
(SL)

Mepiquat Chloride 25% SL

PGR

Dosage:

Can be applied to all Crops:
but especially the following:

Crop	Treatment	Rate of use (max ind.dose)	Time of application
Cotton	It regulates the growth pattern and behaviour of cotton plants such as: darker foliage colour, reduction of plant height and internodal length, more open canopy, better boll retention, earlier maturity.	-1st treatment: 300-400 mL/Ha depending on plant height -Follow-up: 250-500 ml/Ha -Final treatment: 600-1000mL/ha	-During the early flower bud stage -Repeat with interval of about 2 weeks -at the end of the effective flowering period. PHI: 30 days
Onion, Garlic	It provides an increase in efficiency.	300-1000mL/ha	3-3.5 months after planting in onions produced from seed, when the onion has 4-5 leaves, approximately 2.5 months after planting in onions produced from shallots Application in garlic approximately 2.5 months after planting
