

Micronutrient
Fertilizer

GREENSHIELD SP

A Micronutrient Fertilizer for Foliar application. Contains important micronutrients such as iron, zinc, manganese and copper & magnesium which are immediately translocated into the plant. It activates growth and vigour, resulting into better crop and higher yields. It is also suitable for preventing recognizable or undefined nutrient deficiency symptoms.

Composition: w/w
Iron (Fe).....0.54%
Manganese (Mn)...5%
Zinc (Zn).....7%
Copper (Cu).....0.054%
Magnesium(Mg)..0.054%

GREENSHIELD SP

Micronutrient Fertilizer

■ Method of use:

It can be sprayed with standard spray equipment alone, or in combination with any insecticide, fungicide or post-emergence herbicide.

The spray can be performed:

- in the same way as for a pesticide.
- with overhead sprinkler equipment, fitted with fertilizer dosing device.

■ Rate of use:

Foliar application: during the period of vegetative growth of the crop and before flowering of ornamentals:

On field crops:

one application per season: 100-150 g/ha

several applications per season: 50 g/ha / application

On fruit trees and vineyards: 50 g in 100 litres of spray water

On vegetables and ornamentals: 20-30 g in 100 litres of spray water

this product gives the best results when applied during the main vegetation growth period, in one or several spray rounds.
